

Assoc. prof. dr. Airina Volungevičienė

My Institution – Vytautas Magnus University

Subjects that I teach:

- Information Technologies in Education
- Technology enhanced learning curriculum designing
- Quality Assurance in TEL
- Open Educational Resources

About myself

The main concern that I see is to create lessons so that people would experience their outcomes in non-artificial conditions and would get prepared for real life experience. It is difficult to decide how learning should happen be to bring correct understanding.

When I do not teach nor think about teaching using ICT, I spend my time with my family. I teach my three girls creating as amusing lessons, as I can. Their lessons should be easy – going.

Most difficult scenario is to create interesting, real – life situations that would teach us to prepare for autonomous, responsible and real easy going life.
